Critical Risk

Decision

Reject

Recommendation

Applicant exceeds the acceptable business risk threshold and should be rejected or escalated.

Why this decision?

▲ Top Factors Increasing Risk

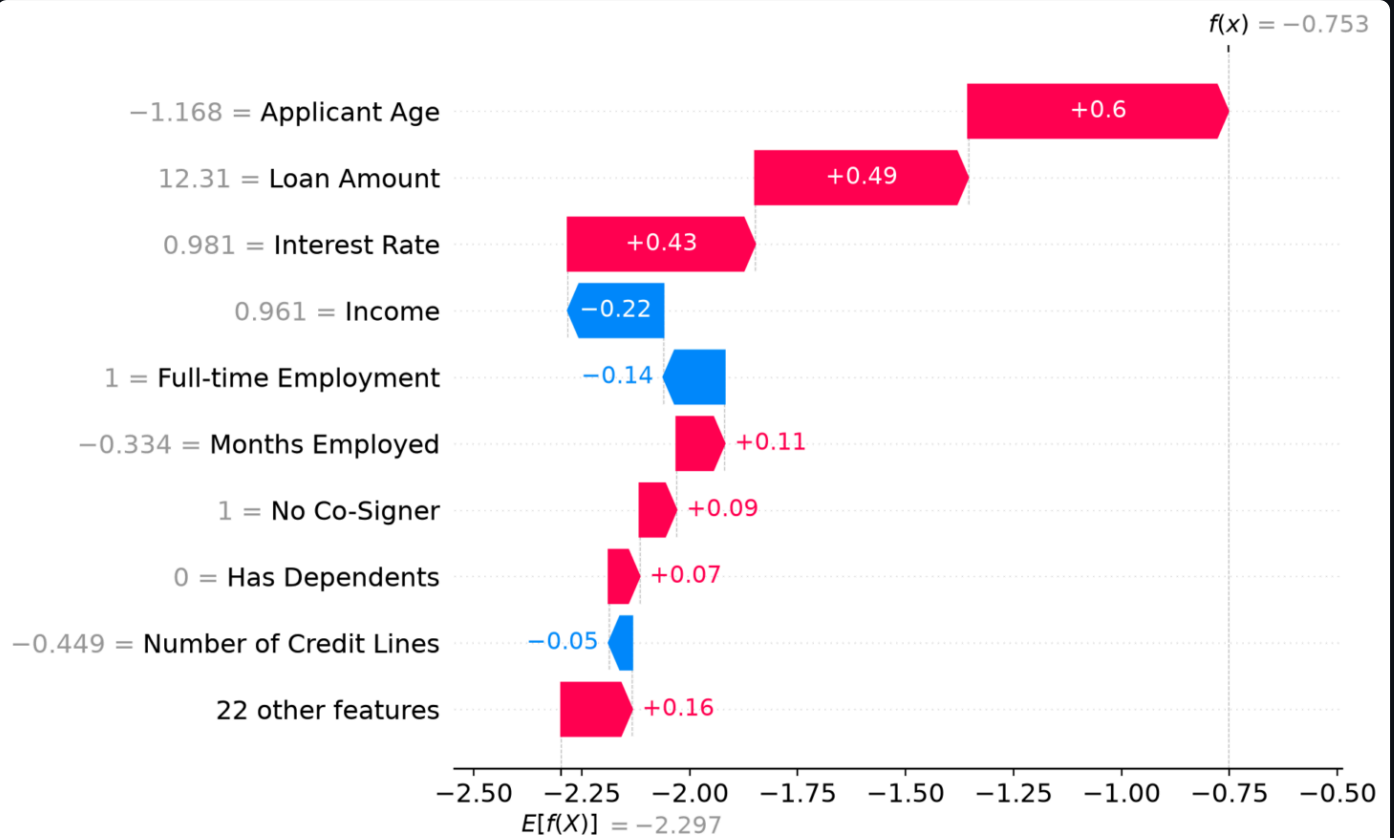

- ▲ **Applicant Age** was one of the strongest contributors to elevated default risk (+0.6024)
- ▲ **Loan Amount** was one of the strongest contributors to elevated default risk (+0.4933)
- ▲ **Interest Rate** was one of the strongest contributors to elevated default risk (+0.4338)
- ▲ **Co-Signer Status** was one of the strongest contributors to elevated default risk (+0.1140)
- ▲ **Months Employed** was one of the strongest contributors to elevated default risk (+0.1115)
- ▲ **Dependent Status** was one of the strongest contributors to elevated default risk (+0.0929)

▼ Top Factors Reducing Risk

- ▼ **Income** reduced risk (-0.2214)
- ▼ **Employment Type** reduced risk (-0.1708)

SHAP values show how much each feature pushed the model prediction upward toward higher default risk or downward toward lower default risk. Positive values increase risk; negative values reduce risk.
